

I. Core Requirement

Use one of the specified open-source tools to collect a minimum of 500 valid Weibo text posts.

II. Tool Selection & Strategy

Choose ONE of the following tools. You must explicitly define your sampling strategy in your report:

- Option A: WEIBO SEARCH
 - Function: Scrapes posts based on search terms.
 - Repository: <https://github.com/dataabc/weibo-search>
 - Strategy Requirement: Determine the "keyword list" that ensures the data is valid and relevant. Define your specific time range.
- Option B: WEIBO CRAWLER
 - Function: Scrapes posts based on Users.
 - Repository: <https://github.com/dataabc/weibo-crawler>
 - Strategy Requirement: Detail your method for sampling the right people you are interested in. Define your specific time range.

III. Deliverables

Submit a single .zip file containing the following three items:

1. Data File (.csv or .json): Your scraped dataset containing at least 500 valid posts.
2. Configuration File: Your modified config file (e.g., config.json) demonstrating the exact parameters used.
3. Lab Report (.pdf): A concise, 1-page report detailing your topic, sampling strategy, and troubleshooting process.

IV. Grading Rubric (100 Points Total)

To achieve a high score, you must demonstrate not only successful data collection but also a clear understanding of your sampling logic and technical execution.

- 1. Data Quality & Completeness (40 pts)
 - 35-40 pts (Excellent): Successfully collected 500+ posts. The raw data is clean, well-formatted, and clearly free of severe garbled text or empty rows.
 - 20-34 pts (Satisfactory): Collected the required amount, but the dataset contains noticeable noise, irrelevant information, or minor formatting issues.

- 0-19 pts (Needs Improvement): Failed to collect 500 posts, or the data is heavily corrupted/unusable.
- 2. Strategy & Rationale (30 pts)
 - 25-30 pts (Excellent): Provides a clear, logical justification for the chosen keywords/users and time range. The strategy aligns perfectly with the provided configuration file.
 - 15-24 pts (Satisfactory): Strategy is mentioned but lacks depth. The rationale for choosing specific parameters is vague.
 - 0-14 pts (Needs Improvement): No clear strategy explained, or parameters appear entirely random and disconnected from any research interest.
- 3. Troubleshooting & Technical Reflection (30 pts)
 - 25-30 pts (Excellent): Detailed explanation of technical challenges faced (e.g., environment setup, cookie expiration, rate limits) and clear, logical steps taken to resolve them. Shows genuine technical engagement.
 - 15-24 pts (Satisfactory): Mentions some issues but lacks detail on how they were resolved. Or, if no issues were faced, provides only a shallow reflection on the tool's mechanics.
 - 0-14 pts (Needs Improvement): No mention of the execution process, challenges, or troubleshooting steps.
